Spotlight Report on: Knowledge and Information Management (KIM)

Developing an Action Plan Prepared by Golden Marzipan, May 2023

Record Keeping – Knowledge Information Management (KIM)

Manual and electronic records should be easy to find, manage and dispose of, when necessary. Good record keeping starts when you create records and continues through to deletion. Classifying, categorising and indexing new records can help with this. It also helps to keep a record of where you store information.

The aims of the emphasis on good record keeping in this strategy are:

- 1. A change in culture and mindset, in which our record keeping is fundamentally about us and the trust placed upon us by our tenants.
- 2. To realise the enormous potential benefits of information to improve our safety and quality of homes, safeguarding and health outcomes.
- 3. Information regarded as a professional service in its own right for us all with appropriate support in using information available for those who need it, so that information benefits everyone and helps reduces inefficiencies.
- 4. Information used to drive integrated services improvement both internally and with partner organisations.
- 5. Information recorded once, at our first contact with professional staff, and shared securely between those who need it to enable data to flow between systems whilst keeping our confidential information safe and secure.
- 6. A culture of transparency, where access to high-quality, evidence-based information about services and the quality of care held by Government and agencies is openly and easily available to us all.
- 7. The widespread use of modern technology to make our services more convenient, accessible and efficient.
- 8. To provide insightful information to managers, trustees and funders.

For most of us, record keeping is a key part of everyday practice. Doing it well and ensuring we meet the required standards is fundamental to effective services Ultimately if no record is made, the agencies we work with may consider the events not to have happened.

We live in a world where hand-written notes are becoming a thing of the past and electronic record keeping is commonplace. Electronic records make handwriting misunderstandings redundant and facilitate improved communication across the organisation.

Hand-held devices allow records to easily be updated on the go. Shared records and the sharing of records can greatly improve communications across the organisation, while also ensuring tenant confidentiality is maintained, where necessary.

The housing management system should be the primary system to maintain records about properties, landlords, tenants, suppliers, repairs, maintenance, rent and service charge income.

SharePoint could be the primary storage library for all documents, correspondence, certificates.

Important notes from telephone calls, emails and any other contact with a resident or their advocates will be noted in the CRM of the housing management system and a copy of any relevant notes (e.g. withing emails) stored in SharePoint.

Good record management is the legal record of the interaction with, and assessment and treatment of, the tenant. If it's not written down it didn't happen!

It is important for effective safeguarding and communication for everyone working in social housing organisations.

Knowledge and Information Management (KIM) Action Plan

 Appointments Set out clear requirements to record an appointment as missed. Conduct wastage analysis on missed appointments. Implement an automated appointment reminder system. 	Train staff on the requirements of the Equality Act 2010. Review internal guidance around recording vulnerabilities.	Review safeguarding policies and procedures.	"Poor information management is such a strong and reoccurring theme across service areas that it is actually the closest thing the sector could get to a silver bullet. "		
		Benchmark against other organisations' good practice in	Richard Blakeway, Housing Ombudsman, May 2023 Spotlight Report on: Knowledge and Information Management (KIM)		
		knowledge and information management. Publish FAQs on websites and keep them updated. Have a clear categorisation system for ATIS/FOI requests. Establish clear data reporting processes. Investigate incoming data			
Define the oversight role of governance for knowledge and information management.	stan man	te adherence to the minimum Idard for knowledge and information Dagement part of the service level Deement with third parties.	Train staff on using systems. Stress test systems prior to change. Undertake a risk assessment regarding knowledge and information shortfalls before the change.		
r	Develop organisational key data recording standard requirements that will ensure good records that support the business and demonstrate compliance with national standards. Ensure databases are easy to interrogate, and that the data can be extracted and used. Review existing databases for capability and capacity to record those key data requirements.
